# FONTFONT

OPENTYPE® USER GUIDE

## SECTIONS

- A | Introduction to OpenType®
- B | Layout Features
- C | Language Support

## SECTION A INTRODUCTION TO OPENTYPE®

### **WHAT IS OPENTYPE?**

OpenType is a font file format developed jointly by Adobe and Microsoft. The two main benefits of the OpenType format are its cross-platform compatibility – you can work with the same font file on Macintosh, Windows or other computers – and its ability to support widely expanded character sets and layout features which provide rich linguistic support and advanced typographic control.

OpenType fonts can be installed and used alongside PostScript Type 1 and TrueType fonts. Since these fonts rely on OpenType-specific tables, non-savvy applications on computers running operating systems prior to OS X and Windows 2000 will not be able to use them without intermediation by system services like ATM.

There are now several FontFont typefaces available in OpenType format with many to follow step by step. They are OpenType fonts with PostScript outlines, i. e. CFF (Compact Font Format) fonts. Each OpenType FontFont is accompanied by a font-specific Info Guide listing all the layout features supported by this font. The font and Info Guide will be delivered as a .zip file which can be decompressed on any computer with StuffIt Expander or WinZip.

---

This document covers the basics of the OpenType format. In Section two you will find a glossary of all OpenType layout features that may be supported by FontFonts. Section C explains the language support and lists all code pages that may be available.

If you look for information about layout features and language support of a specific OpenType FontFont please read the comprehensive font-specific Info Guide for that font.

SECTION A  
INTRODUCTION  
TO OPENTYPE®

**CROSS-PLATFORM  
COMPATIBILITY**

By using one font file only for its entire glyph, metric and bitmap data, OpenType fonts simplify the font management. The same file works on Macintosh, Windows and other computers so you can move font files between platforms for the use in any documents that use type. OpenType FontFonts are partly style-linked, i. e. if the four weights Regular, Italic, Bold and Bold Italic are available, these four fonts are linked and you can access them via the style menu. All other weights are linked with their respective italic version, e. g. Light is linked with Light Italic.

---

**LAYOUT FEATURES**

Traditional PostScript fonts are limited to 256 glyphs forcing the user to install and manage two or more style-related fonts in order to access additional characters. OpenType fonts can contain more than 65.000 glyphs in one cross-platform font file making font management and publishing workflows much easier and more flexible. A single font file may contain many non-standard glyphs, such as old-style figures, tabular figures, small capitals, fractions, swashes, superiors, inferiors, titling letters, contextual and stylistic alternates, a full range of ligatures, symbols and ornaments. The OpenType layout features allow automatic positioning or substitution of glyphs. Section B lists and describes the layout features that may be supported by OpenType FontFonts.

---

**LANGUAGE SUPPORT**

OpenType fonts are based on the Unicode Standard, a multi-byte character encoding that covers nearly all the world's languages. With OpenType it is possible to include multiple language character sets in one font, thus simplifying multilingual text processing. Section C lists all code pages and languages that may be supported by OpenType Standard and OpenType Pro FontFonts. For information about language support of a specific OpenType FontFont please refer to the respective font-specific Info Guide.

---

**USE OF  
OPENTYPE FONTS**

The installation of OpenType fonts is similar to PostScript or TrueType fonts. Please refer to your operating system manual. OpenType-savvy applications provide a user interface that allows applying OpenType layout features to text. Applications that don't support OpenType layout features can still access the basic glyph sets of OpenType fonts which correspond to today's PostScript Type 1 fonts. The full range of language characters and symbols in OpenType fonts is available if application and operating system support Unicode (Windows NT4, 2000, XP and Mac OS X). When using other operating systems and/or non-Unicode-savvy applications only the first 256 characters in the font may be accessed.

SECTION B  
LAYOUT  
FEATURES

OpenType layout features can be used to automatically position or substitute glyphs for more typographic flexibility. Glyphs are the specific visual forms or shapes that characters can take. Characters are the code points assigned by the Unicode Standard which represents the smallest semantic unit of languages, such as letters. One character may correspond to several glyphs: the lowercase *a*, a small capital *A* and an alternate swash lowercase *a* are all the same character but three different glyphs. In case of ligatures one glyph may also represent more than one character, for instance the ffi ligature is one glyph but corresponds to three characters: f, f and i.

For any given character there is a default glyph and positioning behaviour. By applying OpenType layout features to one or more characters you can change the positioning or substitute glyphs. For example, the application of the Small Capital feature to a lowercase a will replace it by the small cap A. Below are descriptions and examples for each layout feature that may be supported by OpenType FontFonts. A listing of layout features for a specific OpenType FontFont can be found in the respective font-specific Info Guide.

## FONTFONT OPENTYPE®

### EXAMPLE

#### ACCESS ALL ALTERNATES

This feature makes all variations of a selected character accessible, via the Glyph Palette.

*n* ▶ *N<sup>n</sup>n<sub>n</sub>n*

#### CONTEXTUAL ALTERNATES

This feature replaces default glyphs with alternate forms which provide better joining behavior.

*first* ▶ *first*

EXAMPLE

gg

STYLISTIC ALTERNATES

This feature replaces the default forms with stylistic alternates. Many fonts contain alternate glyph designs for a purely aesthetic effect; these don't always fit into a clear category like swash or historical.

& ▶ & & &

RR

RANDOMIZE

In order to emulate the irregularity and variety of handwritten text, this feature allows multiple alternate forms to be used.

aardvark ▶ aardvark

fi

STANDARD LIGATURES

The feature replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. Font-Fonts include at least ligatures for ,fi' and ,fl'.

fl ▶ fl

he

CONTEXTUAL LIGATURES

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. Unlike other ligature features, the Contextual Ligatures feature specifies the context in which the ligature is recommended.

the ▶ the

ct

DISCRETIONARY LIGATURES

This feature replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes.

ct ▶ ct

---

EXAMPLE

---

**f**

**HISTORICAL FORMS**

This feature replaces the default (current) forms with the historical alternates.

*s* ▶ *ſ*

---

**fs**

**HISTORICAL LIGATURES**

This feature replaces the default (current) forms with the historical alternates.

*ſs* ▶ *ſſ*

---

**nn**

**UNICASE**

This feature maps upper- and lowercase letters to a mixed set of lowercase and small capital forms, resulting in a single case alphabet.

*aBove* ▶ *above*

---

**aA**

**SMALL CAPITALS**

Turns lowercase characters into Small Capitals. Forms related to Small Capitals, such as Oldstyle Figures, may be included.

*abc* ▶ *ABC*

---

**AA**

**SMALL CAPITALS FROM CAPITALS**

This feature turns capital characters into Small Capitals. It is generally used for words which would otherwise be set in all caps, such as acronyms, but which are desired in small-cap form to avoid disrupting the flow of text.

*ABC* ▶ *ABC*

---

EXAMPLE

**PETITE CAPITALS FROM CAPITALS**

Turns capital characters into Petite Capitals.

ABC ▶ ABC

**PETITE CAPITALS**

Some fonts contain an additional size of capital letters, shorter than the regular Small Caps and whimsically referred to as Petite Caps. This feature turns lowercase characters into Petite Capitals. Forms related to Petite Capitals, such as specially designed figures, may be included.

abc ▶ ABC

**CASE SENSITIVE FORMS**

By default, glyphs in a text face are designed to work with lowercase characters. This feature shifts various punctuation marks up to a position that works better with all-capital sequences or sets of lining figures. This feature changes also automatically Oldstyle Figures to Lining Figures.

{I})>I« ▶ {I})>I«  
»I---▶ »I---

**CAPITAL SPACING**

The Capital Spacing feature adjusts inter-glyph spacing for all-capital text. Most typefaces contain capitals and lowercase characters, and the capitals are positioned to work with the lowercase. When capitals are used for words, they need more space between them for legibility and aesthetics.

ABC ▶ ABC

EXAMPLE

**TITLING**

This feature replaces the default glyphs with corresponding forms designed specifically for titling.

ABC ▶ ABC

**SWASH**

This feature replaces default character glyphs with corresponding swash glyphs.

k ▶ k

**CONTEXTUAL SWASH**

This feature replaces default character glyphs with corresponding swash glyphs in a specified context.

of ▶ of

**FRACTIONS**

The feature replaces figures separated by a slash with common (diagonal) fractions. The number of fractions in a font may vary. FontFonts include fractions for at least 1/4, 1/2 and 3/4.

1/2 ▶ 1/2

**ALTERNATIVE FRACTIONS**

This feature replaces figures separated by a slash with an alternative (nut fraction) form. E. g. if you enter 3/4 in a document you will get a specified three-quarter nut fraction.

1/4 ▶ 1/4

SECTION B  
LAYOUT  
FEATURES

EXAMPLE

**ORDINALS**

This feature replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

$2n \blacktriangleright 2^n$

**NUMERATORS**

This feature replaces selected figures which precede a slash with numerator figures, and replaces the typographic slash with the fraction slash.

$4/ \blacktriangleright \frac{4}{}$

**DENOMINATORS**

Replaces selected figures which follow a slash with denominator figures in order to build additional fractions.

$/9 \blacktriangleright \frac{}{9}$

**SCIENTIFIC INFERIORS**

This feature replaces Lining or Oldstyle Figures with inferior figures (smaller glyphs which sit lower than the standard baseline, primarily for chemical or mathematical notation). May also replace lowercase characters with alphabetic inferiors.

$CO_2 \blacktriangleright CO_2$

**SUPERSCRIPT**

Lining or oldstyle figures are replaced with superior figures (primarily for footnote indication), and lowercase letters are replaced with superior letters (primarily for abbreviated French titles).

$m3 \blacktriangleright m^3$

EXAMPLE

**N<sub>2</sub>**

**SUBSCRIPT**

This feature may replace a default glyph with a subscript glyph.

*N*<sub>2</sub> ▶ *N*<sub>2</sub>

**13**

**OLDSTYLE FIGURES**

Changes selected figures from the lining style to the oldstyle form.

*167* ▶ *167*

**13**

**LINING FIGURES**

This feature changes selected figures from oldstyle to the lining form.

289 ▶ 289

**1|3**

**PROPORTIONAL FIGURES**

This feature replaces figure glyphs set on uniform (tabular) widths with corresponding glyphs set on glyph-specific (proportional) widths.

3|2|8 ▶ 328  
1|5|2 ▶ 152

**1|3**

**TABULAR FIGURES**

This feature replaces figure glyphs set on proportional widths with corresponding glyphs set on uniform (tabular) widths.

328 ▶ 3|2|8  
152 ▶ 1|5|2

EXAMPLE

**SLASHED ZERO**

Some fonts contain both a default form of zero and an alternative form which uses a diagonal slash through the counter. Especially in condensed designs, it can be difficult to distinguish between 0 and O (zero and capital O) in any situation where capitals and lining figures may be arbitrarily mixed. This feature allows the user to change from the default 0 to a slashed form.

0n 01 ▶ 0n 01

**MATHEMATICAL GREEK**

This feature replaces standard typographic forms of Greek glyphs with corresponding forms commonly used in mathematical notation.

$\pi \Sigma$  ▶  $\Pi \Sigma$

**ALTERNATE ANNOTATION FORMS**

Replaces default glyphs with various notational forms (e.g. glyphs placed in open or solid circles, squares, parentheses, diamonds or rounded boxes).

123! ▶ ① ② ③ ④

**ORNAMENTS**

This is a dual-function feature which uses two input methods to give the user access to ornament glyphs (e. g. fleurons, dingbats and border elements) in the font. One method replaces the bullet character with a selection from the full set of available ornaments; the other replaces specific lower ASCII characters with ornaments assigned to them.

abc ▶ 🌐 ✉️ 📱

## SECTION B LAYOUT FEATURES

---

### ADDITIONAL ICONS

These additional icons do not describe any layout features but other important characteristics of the fonts. The icons shown here mean: the font is an OpenType Standard font, the font is OpenType Pro, the font contains a EURO character, the font supports CE encoding, Greek encoding and Cyrillic encoding.

---

## SECTION C LANGUAGE SUPPORT

### ACCESSING EXTENDED CHARACTERS

Applications and operating systems that make use of the Unicode Standard for text processing can provide easy access to the wide range of accented characters and special symbols in OpenType fonts thus greatly simplifying multilingual typesetting. All OpenType Standard FontFonts have at least the character sets of the code pages MS Windows 1252 and Mac OS Roman. OpenType Pro FontFonts add a full range of characters to support languages such as Czech, Turkish and Latvian. Many also contain Greek or Cyrillic or Cyrillic and Greek character extensions in the same font.

All Unicode-encoded glyphs in an OpenType font will show up in the Windows NT, 2000 or XP Character Map accessory, allowing direct copying and pasting of any OpenType glyph into any application that supports Unicode. On Mac OS X the Character Palette offers a similar function. OS X users may also install and select a Unicode keyboard that allows direct access to any Unicode character in most Unicode-supporting applications
